## **Assessment of the implementation of the Convention: financing and technology transfer**

Saner, Philippe ; Haeni, Matthias

**Abstract:** This document contains the synthesis and preliminary analysis of information submitted by country Parties and other reporting entities on operational objective 5 of the 10-year strategic plan and framework to enhance the implementation of the Convention (2008–2018): Financing and technology transfer. It provides updates on the five relevant performance indicators from the global, regional and subregional perspectives and identifies possible trends towards reaching the targets set for these indicators. The document also offers some recommendations for consideration by the Committee for the Review of the Implementation of the Convention on the need to adjust, streamline and strengthen measures aimed at achieving this objective. Considerations regarding the reporting process, including possible refinement in the set of performance indicators and associated methodologies, are summarized in the recommendations to be included in the iterative process.

### Committee for the Review of the Implementation of the Convention

#### Thirteenth session

Bonn, 25–27 March 2015

Item 2 (e) of the provisional agenda

#### Assessment of the implementation of the Convention

#### Financing and technology transfer

### Assessment of the implementation of the Convention: financing and technology transfer

#### Note by the secretariat

#### *Summary*

This document contains the synthesis and preliminary analysis of information submitted by country Parties and other reporting entities on operational objective 5 of the 10-year strategic plan and framework to enhance the implementation of the Convention (2008–2018): Financing and technology transfer. It provides updates on the five relevant performance indicators from the global, regional and subregional perspectives and identifies possible trends towards reaching the targets set for these indicators.

The document also offers some recommendations for consideration by the Committee for the Review of the Implementation of the Convention on the need to adjust, streamline and strengthen measures aimed at achieving this objective.

Considerations regarding the reporting process, including possible refinement in the set of performance indicators and associated methodologies, are summarized in the recommendations to be included in the iterative process.

## List of abbreviations

CEE	Central and Eastern Europe [UNCCD regional annex]
COP	Conference of the Parties
CRIC	Committee for the Review of the Implementation of the Convention
DLDD	desertification, land degradation and drought
GEF	Global Environment Facility
GM	Global Mechanism [of the UNCCD]
GSP	Global Support Programme
IFS	Integrated Financing Strategy
IGO	intergovernmental organizations
IIF	integrated investment framework
LAC	Latin America and the Caribbean [UNCCD regional annex]
NMED	Northern Mediterranean [UNCCD regional annex]
OO	operational objective [of the 10-year Strategic Plan and Framework of the UNCCD]
OECD	Organization for Economic Co-Operation and Development
PRAIS	Performance Review and Assessment of the Implementation System
RAP	regional action programme
SRAP	subregional action programme
UFA	Unified Financial Annex
UNCCD	United Nations Convention to Combat Desertification
UNDP	United Nations Development Programme

## **I. Introduction**

1. By decision 16/COP.11, the Conference of the Parties (COP) called upon the secretariat of the United Nations Convention to Combat Desertification (UNCCD) together with the Global Mechanism (GM) of the UNCCD to prepare revised guidelines and templates for reporting, reduce the overall number of performance indicators and simplify the performance review and assessment of implementation system, in order to alleviate the overall reporting burden for Parties and other reporting entities.

2. In response to this request, the UNCCD secretariat and the GM collaborated extensively throughout the 2013–2014 biennium in simplifying the reporting templates, especially for financial reporting, and engaged with the Global Environment Facility (GEF) and the United Nations Environment Programme on the establishment of a Global Support Programme (GSP) aimed at increasing the quantity, and improving the quality, of information for the review of implementation of the Convention.

3. With a total budget of USD 4.6 million, the GSP delivered the following outputs: (i) improved capacities of UNCCD reporting entities for indicator-based reporting on Convention implementation using the new reporting guidelines and templates; (ii) a technical assistance framework to facilitate the work at country level relating to the 2014–2015 reporting and review process; (iii) improved UNCCD reporting systems (including an enhanced Performance Review and Assessment of the Implementation System (PRAIS) platform) that facilitates reporting by all reporting entities.

4. This major capacity-building effort, deployed mainly through eight interactive subregional training workshops, alongside a comprehensive reporting manual, an improved online reporting platform and a dedicated helpdesk service and regional backstop system to provide local assistance, enabled country Parties to engage extensively in the fifth UNCCD reporting and review cycle, for a reporting rate reaching or approaching 100 per cent in all regional annexes.

5. The present document contains a synthesis and preliminary analysis of information submitted in 2014 by country Parties and other reporting entities through the simplified financial reporting templates Unified Financial Annex (UFA), as well as of information on trends in historical data where possible. The analysis was undertaken by the GM in collaboration with a team of analysts from the University of Zurich and the Organization for Economic Co-Operation and Development (OECD). The analyses were conducted in conformity with decisions 13/COP.9, 14/COP.11 and 16/COP.11.

## **II. Objectives, scope and methodology and limitations of the analysis**

### **A. Objectives**

6. The overall objective of this report is to present the results of the analysis of operational objective 5 (OO 5) “Financing and technology transfer” on the basis of the data submitted to the UNCCD during the 2012–2013 biennium and other historical data. The analysis of financial flows feeds into the implementation of the Convention, and is based on a revised analytical framework.

7. The purpose of this document is to perform trend analyses for all five performance indicators pertaining to OO 5 in order to monitor progress made towards its global targets and to identify the main gaps in the allocation of resources.

8. The analysis is based on the partially-revised questions contained in the consolidated indicators CONS-O-14 to CONS-O-18 sections of the official reports submitted by country Parties and other reporting entities for the 2012–2013 biennium. The consolidated indicators assess (i) the number of integrated investment frameworks (IIFs) established, (ii) the contributions of developed country Parties (DCPs), (iii) the adequacy, timeliness and predictability of developed country Parties commitments, (iv) the number of projects successfully submitted and approved, (v) those affected country Parties (ACPs) enabling activities for access to technology.

9. The financial data, statistics and analyses included in this document originate from the data submitted by affected and developed country Parties, institutions reporting on the implementation of subregional and regional action programmes (SRAPs and RAPs), the GEF, United Nations agencies and intergovernmental organizations (IGOs), and the GM through PRAIS. It should be noted that in addition to the data submitted by 3 October 2014, the official reporting deadline, the corrections submitted by 15 October 2014<sup>1</sup> are also included in the analysis.

## **B. Scope and methodology**

10. This document is a synthesis of the revised preliminary analysis of information submitted by Parties and observers on OO 5 “Financing and technology transfer” of the 10-year strategic plan and framework to enhance the implementation of the Convention (2008–2018) (The Strategy).<sup>2</sup>

11. Where the data permitted, systematic trend analyses have been performed, taking into account the reports for 2008–2009 and 2010–2011, in order to record progress towards reaching the targets set for these indicators.

12. The analyses were performed using the R statistical software,<sup>3</sup> a tool that provides state-of-the art visualization and most innovative functionality in data aggregation, data handling and research. Where needed, R was further combined with other software packages, such as Data-Driven Documents<sup>4</sup> for the dynamic visualization of real-time data.

13. The first step in the data handling was to merge all entity data into one large data set. Various data quality and consistency checks were performed in the process. Potential pitfalls included the use of various languages (Arabic, Russian, Spanish, etc.) and formats (left-to-right and right-to-left languages, plus various record delimiters within the PDF fillable forms). Furthermore, the transformation of historical data from the PRAIS database was found to be structurally challenging due to the fact that the question tags of the previous bienniums were in a different granularity from the tags of the current reporting exercises in the biennium 2012–2013.

14. As is typical with large datasets, the complexity of the data influenced the time required to ensure and manage the quality of the processing of the data (from pre-processing/merging to the visualization). In order to complete the analysis presented here, a

<sup>1</sup> Corrections were submitted by a few developed country Parties who had initially submitted weighted values in their Unified Financial Annex.

<sup>2</sup> Decision 3/COP.8.

<sup>3</sup> See <<http://www.r-project.org>>.

<sup>4</sup> See <<http://d3js.org>>.

total of more than 1 million records were analysed with a programmed code of more than 7,500 rows. Only a few exceptions needed to be dealt with, less than ten cases in total out of more than 5,000 rows, mostly in relation to entries without a project name and/or commitment.

15. General conclusions are presented at the end of this document (see chapter IX). Recommendations on the measures that may be put in place to enhance the financing and technology transfer for UNCCD-related activities for consideration by the Committee for the Review of the Implementation of the Convention (CRIC) are included in chapter X. From these recommendations, the CRIC may wish to provide actionable guidance to Parties, Convention institutions and subsidiary bodies, as well as to other relevant organizations for consideration by the COP at its twelfth session (COP 12).

## **C. Limitations**

16. The offline reporting templates introduced in 2014 could not be equipped with full data entry controls in all fields, particularly in the case of open text fields. This led to the collection of large amounts of unstructured data, in multiple national languages and containing special characters that were technically difficult to normalize and analyse in a timely and cost-efficient manner.

17. The simplification of the reporting templates increased the complexity of the analysis because it required the analysts to compare different datasets having a different level of detail or granularity and stored in different databases. Within the time available for the present analysis, only a limited number of comparisons were possible, namely at regional and global level. More detailed comparative analyses can be undertaken once a comprehensive database, merging all the historical datasets, and a data mining platform has been developed. This work is planned to be completed in the course of 2015 within the framework of the GSP project.

18. The process of analysing financial data was complex, owing to the many layers of analysis required to produce and integrate country, subregional, regional and global figures. Data integrity controls were performed to eliminate duplicate records and verify the level of consistency of the data with the reporting guidelines and definitions.

19. During the process of data cleaning, some of the financial annexes were found to be incomplete and the majority showed an inconsistent use of field delimiters, for example open quotes in free text or non-standard abbreviations. Data reported in United Nations languages were included in the analysis, although this generated additional challenges and slowed processing time. For the 2012–2013 biennium, activities reported without a corresponding nominal commitment were not included in the analysis.

20. Several reporting entities associated single financial figures to multiple countries, either within or across regions and subregions. These commitments were not included in the aggregated computation for the region and subregion concerned, but rather for the global figures. Where applicable, commitments were split among the multiple recipients to assess the flows accruing to the individual recipients.

21. Because of the difference in the number of reports available for the analyses across the three reporting cycles, the trends observed between the bienniums (2008–2009, 2010–2011, 2012–2013) should be regarded as indicative only. In particular, differences may occur when comparing group trends with those of individual entities reporting for the three bienniums. Details regarding this level of analysis can be made available upon request.

22. Although the historical performance indicator data could largely be integrated with the current reporting of the CONS-O-14 to CONS-O-18, the current analyses did not

correlate past country expectations with their later actions, for example testing the hypothesis as to whether indicated planning or commitments were truly realized in later bienniums. Such analyses are clearly needed as the next step forward in order to understand the main gaps with regard to the commitments dedicated to desertification, land degradation and drought (DLDD)-related projects and programmes.

23. Where the reporting templates allowed multiple entries for a single field the analysis was performed according to number of occurrences. This should not be confused with the number of activities, which is smaller.

### III. Status of reported activities

24. Countries report as either affected country Parties or developed country Parties, or as both when they have dual status (figure 1).

25. In the current reporting exercise, the UNCCD received a total of 197 reports, including 159 reports from affected country Parties, 31 from developed country Parties, four from United Nations agencies and IGOs, and three from SRAPS and RAPs (table 1). Compared to previous bienniums the reporting range increased substantially and reached 60 per cent as a global average.

26. As regards affected country Parties, the reports submitted for the 2012–2013 biennium increased substantially compared to the previous biennium (figures 2–4): 98 per cent for Africa (53 submitted reports, compared to 28 reports for 2010–2011), 89 per cent for Asia (47 submitted reports compared to 21 reports for 2010–2011), 94 per cent for Latin America and the Caribbean (LAC) (31 submitted reports compared to 11 reports for 2010–2011), 100 per cent for Central and Eastern Europe (CEE) (15 submitted reports compared to seven reports for 2010–2011) and 100 per cent for the Northern Mediterranean (NMED) (12 submitted reports compared to four reports for 2010–2011).

27. Worldwide, the reporting rate was approximately 95 per cent for affected country Parties and 69 per cent for developed country Parties (figure 5; see also document ICCD/CRIC(13)/INF.2).

### IV. Performance indicator CONS-O-14 for outcome 5.1 of The Strategy

*Number of affected country Parties, subregional and regional entities whose investment frameworks, established within the integrated financial strategy (IFS) devised by the Global Mechanism (GM) or within other integrated financing strategies, reflect leveraging national, bilateral and multilateral resources to combat DLDD / Global target  $\geq 50$  per cent by 2014.*

28. The trend in the number of countries to have established IIFs increased from 11 per cent in 2008–2009 to 25 per cent in 2010–2011 and to 37 per cent in 2012–2013 (tables 2–3 and figures 6–8). An increase can be observed among all five regions: Africa, Asia, LAC, CEE and NMED, with a total of 57 affected country Parties and 3 subregional entities that have established IIFs (37 per cent) in 2012–2013 (previously 12 and 17 affected country Parties that had established IIFs for 2008–2009 and 2010–2011 respectively) (see tables 2–3).

29. For Africa, an additional 22 affected country Parties reported that they had established IIFs in 2012–2013 compared to the previous 2010–2011 biennium. At the same time the number of affected country Parties which reported no plans to establish IIFs remained unchanged, namely 5 across the entire region. 14 affected country Parties and 1 subregional entity reported on plans to establish IIFs in the future. Specifically, 5 were planned for the 2014–2015 biennium, and 9 for the 2016–2017 biennium.

30. In Asia, an additional 8 affected country Parties reported that they had established IIFs in 2012–2013 compared to the previous 2010–2011 biennium. At the same time the number of affected country Parties that reported no plans to establish IIFs increased from seven to 17, and 20 affected country Parties and 2 subregional entities reported on plans to establish IIFs in the future. Specifically, 10 were planned for the 2014–2015 biennium, 9 for the 2016–2017 and 3 for the 2018–2019 biennium.

31. In LAC, an additional eight affected country Parties reported that they had established IIFs in 2012–2013 compared to the 2010–2011 biennium. At the same time the number of affected country Parties that reported no plans to establish IIFs increased from two to eight and 12 affected country Parties reported on plans to establish IIFs in the future. Specifically, 4 were planned for the 2014–2015 biennium, 7 for the 2016–2017 biennium and 1 for the 2018–2019 biennium.

32. For CEE, an additional affected country Parties reported that it had established an IIF in 2012–2013 compared to the 2010–2011 biennium. At the same time the number of affected country Parties that reported no plans to establish IIFs increased from four to seven, and six affected country Parties reported on plans to establish IIFs in the future. Specifically, four were planned for the 2014–2015 biennium and two for the 2016–2017 biennium.

33. In NMED an additional four affected country Parties reported that they had established IIFs in 2012–2013 compared to the 2010–2011 biennium. At the same time the number of affected country Parties that reported no plans to establish IIFs increased from three to eight, and none of the affected country Parties reported on plans to establish IIFs in the future.

34. In total, 55 reports indicated that the establishment of an IIF is planned (table 2 and figure 9) for the upcoming bienniums 2014–2015, 2016–2017 and 2018–2019. The plans to establish an IIF in the next two bienniums were reported as follows across the subregions: Southern Africa (8), West Asia (8), Caribbean (8), CEE (6), Central Africa (5), Central Asia (4), Pacific (3), South Cone (3), Western Africa (2), South Asia (2), South East Asia (2), Northern Africa (1) and Mesoamerica (1). Five countries in the following subregions indicated plans to establish an IIF at a later stage in the 2018–2019 biennium: Southern Africa, Central Asia, Pacific, West Asia and the Caribbean.

35. Seven developed country Parties reported that they supported the development of IIFs in 2012–2013 and two were supported by multilaterals, including the reporting exercises by the GEF, United Nations agencies and IGOs. Compared to the previous reporting, where nine supported IIFs were reported for 2010–2011 and three for 2008–2009 (tables 2–3 and figures 10–12), the trend remained constant with a slight decrease compared to the last biennium.

36. With the joint efforts of those affected country Parties that indicated plans to establish IIFs in 2014–2015 along with their development partners, particularly the developed country Parties that supported the development of IIF in previous biennia, it is likely that the target of 50 per cent could be achieved by 2014 (figures 10–12). This would be verified once data on 2014 activities become available.

## V. Performance indicator CONS-O-15 for outcome 5.2 of The Strategy

*Amount of financial resources made available by developed country Parties to combat DLDD / Global target: None.*

37. This indicator was analysed by the GM from the data provided by developed country Parties which were requested to report in the UFA.

38. A stable trend was reported in the amount of financial resources made available by developed country Parties to combat DLDD. The total commitment of USD 2.2 billion to affected non-developed country Parties for DLDD-related activities in 2012–2013 is higher than the figure of USD 1.3 billion in 2010–2011, but less than the USD 2.7 billion committed in 2008–2009 (see table 4 and figures 13–15). The weighted commitment was USD 803 million in 2012–2013 and a total of 1,579 activities were reported. Most activities and nominal commitments were reported for Africa (USD 1.3 billion), followed by Asia (USD 751 million), LAC (USD 160 million), CEE (USD 12.7 million) and NMED (USD 890,000).

39. With respect to Africa, countries in the Eastern and Western subregions dominate the number of activities reported as well as the nominal and weighted commitments, indicating that these subregions are mainly targeted with financial resources made available by developed country Parties to combat DLDD (table 4 and figures 16–18).

40. For LAC, countries in the Andean subregion are predominant, and also to a lesser extent countries in the South Cone, indicating that these subregions are mainly targeted with financial resources made available by developed country Parties to combat DLDD (table 4 and figures 19–21).

41. As regards Asia, the countries in the South Asian and South East Asian subregions reported the most resources made available by developed country Parties to combat DLDD, and also to a lesser extent countries in East Asia, with, however, a lesser focus on desertification (compare nominal to weighted commitments in table 4) (figures 22–24).

42. For countries in the entire CEE region, 23 activities were reported with a total nominal commitment of USD 12.7 million and a weighted commitment of USD 5.4 million (table 4 and figures 25–27).

43. In the entire region of NMED, four activities were reported, with a total nominal commitment of USD 890,000 and a weighted commitment of USD 570,000 (table 4 and figures 25–27).

## VI. Performance indicator CONS-O-16 for outcome 5.3 of The Strategy

*Degree of adequacy, timeliness and predictability of financial resources made available by developed country Parties to combat DLDD / Global target: None.*

44. The qualitative assessment of the degree of adequacy, timeliness and predictability of financial resources made available by developed country Parties to combat DLDD ranged from a minimum of one (not well received) to a maximum of three (well received).

45. With regard to the adequacy of financial resources made available by developed country Parties to combat DLDD, the trend increased from 1.7 (2008–2009) to 2.5 (2012–2013) on average, for timeliness the trend increased from 1.8 (2008–2009) to 2.4 (2012–2013) on average and for predictability the trend increased from 1.6 (2008–2009) to 2.5 (2012–2013) on average (figure 28 and table 5).

46. Countries from all regions received substantially more assistance in raising resources from bilateral donors (69 countries in 2012–2013) compared to the previous bienniums (31 countries in 2008–2009 and 29 countries in 2010–2011) (table 6 and figures 29–31), and more countries were reporting in this biennium which did not yet receive assistance in raising resources from bilateral donors (table 7).

47. For Africa, an additional 12 countries received assistance for raising resources from bilateral donors in 2012–2013 compared to the previous biennium 2010–2011. The countries of the Southern and Western Africa subregions received the most assistance in raising resources from bilateral donors; however, countries of all regions rated the access (adequacy, timeliness and predictability) to financial resources as above average (table 5–6, figures 28–29).

48. In LAC, an additional seven countries received assistance for raising resources from bilateral donors in 2012–2013 compared to the previous biennium 2010–2011. The countries of the Andean subregion and also those of the South Cone showed the lowest average values (1.5 and 2.0 respectively for 2012–2013) for the qualitative assessment of the availability of financial resources. However, countries of the Caribbean and Mesoamerica reported that they benefited most from assistance received by bilateral donors in this region (tables 5–6 and figures 28–29).

49. For Asia, an additional 17 countries received assistance for raising resources from bilateral donors in 2012–2013 compared to the previous biennium 2010–2011. The largest share of this increase can be credited to countries of the Pacific subregion, with nine additional countries reporting the reception of bilateral assistance in 2012–2013. Countries of all subregions reported that they agreed with the adequacy, timeliness and predictability of financial resources made available by developed country Parties.

50. In the entire region of CEE, an additional four countries received assistance for raising resources from bilateral donors in 2012–2013 compared to the previous biennium 2010–2011. The countries of this region reported that they agreed with the adequacy, timeliness and predictability of financial resources made available by developed country Parties.

51. In the entire NMED region, no countries received assistance for raising resources from bilateral donors in 2012–2013. In the case of these countries, the qualitative assessment of the adequacy, timeliness and predictability of financial resources made available by developed country Parties remained constant, despite a lack of data for 2010–2011 which makes identification of a trend challenging.

## VII. Performance indicator CONS-O-17 for outcome 5.3 of The Strategy

*Number of DLDD-related project proposals successfully submitted for financing to international financial institutions, facilities and funds, including the GEF / Global target: A steady growth in the number of DLDD-related successfully submitted project proposals is recorded along the implementation period of The Strategy: 2009 – 2018.*

52. The GEF, the GM and the United Nations Development Programme (UNDP) reported a total of 164 submitted proposals and 172 funded projects with a total commitment of USD 1.1 billion. The largest share is reported by the GEF (USD 890 million), followed by the UNDP (USD 147 million) and the GM (USD 14 million). In previous biennia the total project amount reported by the GEF was USD 266 million in 2010–2011 (including co-financing USD 2.5 billion), and USD 176 million in 2008–2009.

53. While the aggregate United Nations agencies and intergovernmental organizations commitments reported within the OO 5 reporting cover USD 1.1 billion, the commitments reported to UFA indicate a higher amount of USD 5.1 billion. The difference is likely to be explained by co-financing as indicated by the GEF (USD 2.9 billion).

54. A comparison of the number of ongoing projects and project proposals submitted in the previous bienniums across regions and subregions is not directly possible, as these were reported by the country Parties. In the current biennium the data on CONS-O-17 was provided by the multilateral institutions (see table 8), but not by the countries.

55. The following sources of information were provided by the United Nations organizations and intergovernmental organizations together with the amounts stated above:

(a) For the GEF: “(i) a total of 107 projects were approved with funding from the LDFA<sup>5</sup>. The total GEF grant for the projects amounted to USD 652 million, with an additional USD 2.9 billion in co-financing. Of the total GEF grant, USD 199 million were LDFA resources utilized by countries through stand-alone focal area projects or through multi-focal area projects; (ii) the portfolio includes 76 full-sized projects, five medium-sized projects, and 27 Enabling Activity projects. Forty-one of the projects are stand-alone LDFAs utilizing USD 61 million (31 per cent), while 60 are multi-focal area projects using USD 578 million from GEF resources, including USD 138 million (69 per cent) of the LDFA resources; (iii) a total of USD 139 million of the focal area resources invested through multi-focal area projects was linked to USD 439 million from other focal areas, including Biodiversity (USD 223 million), Climate Change (USD 139 million), International Waters (USD 22 million), and the SFM/REDD-plus<sup>6</sup> incentive program (USD 55 million). In addition, 31 land degradation relevant projects were approved for LDCF<sup>7</sup> funding and 13 land degradation relevant projects were approved for SCCF<sup>8</sup> funding for a total of USD 238 million”;

(b) For the GM: “Grant proposals were successfully submitted to the European Commission for the following projects: FLEUVE - Front Local Environmental pour une Union VertE (EUR 7,750,000), scope | acp, a South-South cooperation project (USD 1,530,648 in 2012–2013), and Integrating Climate Change Finance into Sustainable Land Management Strategies project (USD 2,008,210 in 2012–2013)”;

(c) For the UNDP: “Total UNDP-GEF portfolio amount in 2012–2013 equals USD 117 million: Projects listed above as pipeline are the Land Degradation and Multi-Focal Area (MFA) projects with Project Identification Form (PIF) approvals in 2012 and 2013: ten projects (four are pure Land Degradation), total USD 52.7 million in GEF grants

<sup>5</sup> Land Degradation Focal Area.

<sup>6</sup> Sustainable Forest Management (SFM) and Reducing emissions from deforestation and forest degradation, conservation of forest carbon stocks, sustainable management of forests and enhancement of forest carbon stocks in developing countries (REDD+).

<sup>7</sup> The Least Developed Countries Fund.

<sup>8</sup> Special Climate Change Fund.

plus USD 1.9 million in Project Preparatory Grant (PPG) funds equals USD54.6 million. Projects listed above as approved were CEO endorsed in 2012”.

## VIII. Performance indicator CONS-O-18 for outcome 5.5 of The Strategy

*Amount of financial resources and type of incentives which have enabled access to technology by affected country Parties / Global target: A steady growth in the number of DLDD-related successfully submitted project proposals is recorded along the implementation period of The Strategy: 2009 – 2018.*

56. In 2012, USD 13.3 billion was allocated to facilitating technology transfer, more than twice the amount for the previous reporting cycle 2010–2011 (see figure 32 and table 9). The total amount declined to USD 9.1 billion in 2013 due to the reduced amount reported by Mesoamerica.

57. For Africa, an additional 27 countries established incentives to facilitate access to technology in 2012–2013 compared to the previous biennium 2010–2011. Countries of the subregions of Southern and Western Africa reported most on their efforts to establish incentives to facilitate access to technology. The subregions show equal shares of countries that did not establish incentives in 2012–2013 (table 10 and figures 33–35).

58. In LAC, an additional 14 countries established incentives to facilitate access to technology in 2012–2013 compared to the previous biennium 2010–2011. The largest share of this increase can be attributed to the Caribbean, with eight additional countries reporting on their efforts to establish incentives to facilitate access to technology. Additionally, countries of the Caribbean report the highest number of countries that did not establish incentives to facilitate access to technology (table 10 and figures 33–35).

59. Statistics for Asia indicate that an additional 20 countries established incentives to facilitate access to technology in 2012–2013 compared to the previous biennium 2010–2011. Countries of the Pacific, South Asia, South East Asia and West Asia subregions report the largest increase and also only a few countries that have not established incentives. For countries of the subregion of South Asia the figure is zero (table 10 and figures 33–35).

60. For CEE, an additional eight countries established incentives to facilitate access to technology in 2012–2013 compared to the previous biennium 2010–2011. A total of four countries have not established such incentives (table 10 and figures 33–35).

61. In NMED, a reduction in the number of countries that have established incentives to facilitate access to technology was observed in 2012–2013 (four countries) compared to the previous biennium 2010–2011 (three countries). A total of seven countries have not established incentives (table 10 and figures 33–35).

62. A positive trend was observed, with a total of 105 countries which established incentives to facilitate access to technology in 2012–2013, compared to 35 countries in 2008–2009 and 34 countries in 2010–2011 (see tables 10–11 and figures 33–35). Countries of the Africa region established the highest number of incentives (41 Yes), followed by countries of Asia (32), LAC (18), CEE (10) and NMED (4). The ratio of countries which established incentives to countries that did not establish incentives was stable across the three bienniums (table 11), with on average 70 per cent of all countries reporting that they had established such incentives.

63. The projected increase of financial resources allocated to facilitating access to technology (table 12 and figure 36) ranges from a minimum average across affected country Parties regions of 3.4 per cent for 2015 to a maximum average of 22 per cent for 2016. Subregional predictions are highly volatile and in general there is no clearly identifiable trend (table 12).

64. The planned percentage increase in financial resources allocated to facilitate access to technology as reported for single affected country Parties for 2014–2018 depicts a positive and stable commitment across the years (figure 36).

## IX. Conclusions

65. In the 2012–2013 reporting period, the number of reports submitted by affected country Parties and developed country Parties showed a substantial increasing trend compared to previous bienniums, with an average global coverage of over 95 per cent for affected country Parties and 69 per cent for developed country Parties. Coverage for the UNCCD regional annex was: 98 per cent for countries in Africa, 89 per cent for countries in Asia, 94 per cent for countries in LAC, 100 per cent for countries in CEE and 100 per cent for countries in NMED.

66. CONS-O-14: The trend in the number of countries to have established IIFs is positive across all five regions of the UNCCD annex and reached a total of 37 per cent in 2012–2013.

67. CONS-O-14: Countries and subregional entities in four regions of the UNCCD annex indicated the following future plans to establish IIFs in future bienniums: Africa (15), Asia (22), LAC (12) and CEE (6). The majority of the IIFs were planned to be established in the 2014–2015 biennium (44 per cent) or in the 2016–2017 biennium (49 per cent).

68. CONS-O-14: The trend in the support of the development of IIFs by the developed country Parties remained constant with a slight decrease compared to the last biennium. However, with the joint efforts of those affected country Parties that have indicated plans to establish IIFs and those developed country Parties which have already supported the development of IIFs in previous bienniums, it is likely that the target of 50 per cent by 2014 can be reached.

69. CONS-O-15: A stable trend in the amount of financial resources made available by developed country Parties to combat DLDD was reported. The total commitment of USD 2.2 billion to affected country Parties for DLDD-related activities in 2012–2013 is higher compared to USD 1.3 billion in 2010–2011 but less than USD 2.7 billion in 2008–2009.

70. CONS-O-15: For 2012–2013 a large share of financial resources was made available by developed country Parties to combat DLDD for countries in the following subregions: Eastern and Western Africa, the Andean subregion, South Asia and South East Asia.

71. CONS-O-16: An adequate, timely and predictable availability of resources provided by developed country Parties to combat DLDD was reported by affected country Parties (average rating 2.5 out of a minimum of 1 and a maximum of 3).

72. CONS-O-16: Countries from all regions received substantially more assistance in raising resources from bilateral donors (69 countries in 2012–2013) compared to the previous bienniums (31 countries in 2008–2009 and 29 countries in 2010–2011),

and more countries were reporting in the 2012–2013 biennium that did not yet receive assistance in raising resources from bilateral donors.

73. **CONS-O-16:** Countries in the following subregions reported receiving the most assistance in raising resources from bilateral donors for 2012–2013: Southern and Western Africa, Caribbean and Mesoamerica, Pacific, CEE.

74. **CONS-O-17:** The commitments by multilateral institutions were USD 1.1 billion (GEF: USD 890 million) as reported in 2012–2013 and USD 2.5 billion (GEF: USD 266 million) as reported in document ICCD/CRIC(11)/12 for the previous biennium 2010–2011. The amounts reported in certain cases included co-financing (for example between the GEF and the UNDP), whereas in other cases stand-alone projects were reported.

75. **CONS-O-18:** In 2012, USD 13.3 billion was allocated to facilitate technology transfer, more than twice the amount of the previous reporting cycle 2010–2011. The total amount decreased to USD 9.1 billion in 2013.

76. **CONS-O-18:** A positive trend was identified, with a total of 105 countries which had established incentives to facilitate access to technology in 2012–2013, compared to 35 countries in 2008–2009 and 34 countries in 2010–2011. The following subregions had most countries reporting on their efforts to establish incentives to facilitate access to technology in 2012–2013: Southern and Western Africa, Caribbean, Asia Pacific, South Asia, South East Asia and West Asia, CEE.

77. **CONS-O-18:** The planned percentage increase in financial resources allocated to facilitate access to technology as reported for single affected country Parties for 2014–2018 depicts a positive and stable commitment across the years.

## **X. Recommendations**

78. The following preliminary recommendations may be considered by Parties at the thirteenth session of the CRIC, with a view to initiating early consultations on draft decisions to be forwarded to COP 12 for consideration:

(a) Affected country Parties are urged to increase their efforts in establishing IIFs with the aim of achieving the 50 per cent target set out by The Strategy by 2014. Developed country Parties, the GEF and other multilateral financial institutions are invited to intensify their efforts in supporting all regions in the establishment of IIFs, and specifically those that have expressed plans to establish IIFs for the forthcoming bienniums;

(b) The GM is requested to continue assisting affected country Parties and subregions in developing their IIFs as outlined above and in identifying innovative sources of funding, including new financial opportunities, instruments and mechanisms for this purpose;

(c) Developed country Parties and multilateral institutions, particularly the GEF, are invited to continue to facilitate a sustained increase in the adequacy, timeliness and predictability of the resources provided to affected country Parties and subregions in response to the considerations expressed by these Parties;

(d) As stated in decision 14/COP.11, affected country Parties are invited to continue their ongoing efforts to facilitate access to technology transfer as is reflected in this reporting;

(e) Affected country Parties are invited to step up their efforts in submitting project proposals to multilateral financial institutions, facilities and funds, and to take advantage of support provided for this purpose, particularly (but not limited to) the resources allocated under the GEF and its System for Transparent Allocation of Resources;

(f) The GEF is requested to consider national needs assessments in allocating resources for the next replenishment of the GEF;

(g) Subsidiary bodies and institutions working on the UNCCD process are invited to include the consideration of these recommendations in their respective work programmes and plans that are to be put forward for discussion at COP 12 with a view to providing the required assistance to affected country Parties in relation to operational objective 5 of The Strategy.
